

Instructions

This document contains the instructions for the Dynamic Route Manager Setup Worksheet. The default options are in blue italics.

Define Group Members

These are labels to be able to ascertain one address from another and to make routing possible. There are 128 available subaddresses.

Managing Mode: *Load Balancing Concentrator*, **Fallback Router**, **Multiplexer**, **Broadcaster**, **MPS**

This option is used to determine which method of message distribution should be deployed; the MPS mode of control is customer specific, contact JBM for details.

Member Type: *Group Member*, **Group Manager**

This option will set the hierarchy of message distribution.
